

At Your Fingertips

Every MinuteSM Endpoint Protection delivers behavior based next generation malware defense and managed threat detection services leveraging ENSILO's Endpoint Security technology to provide pre-infection Next Generation Anti-Virus and Endpoint Detection and Response, to contain attacks, prevent data leakage and block malware communications.

The Malware Problem - Evolution Of Pre And Post Infection

Modern malware is evolving at a rapid rate and most traditional security defenses are failing to detect in an efficient timeframe. Effective endpoint security defenses must account for pre and post infection scenarios.

INFECTION LIFECYCLE

PRE-INFECTION

Before endpoint is infected

AV (antivirus) & NGAV (next generation antivirus). Block the known malware via signatures and/or machine learning.

POST-INFECTION

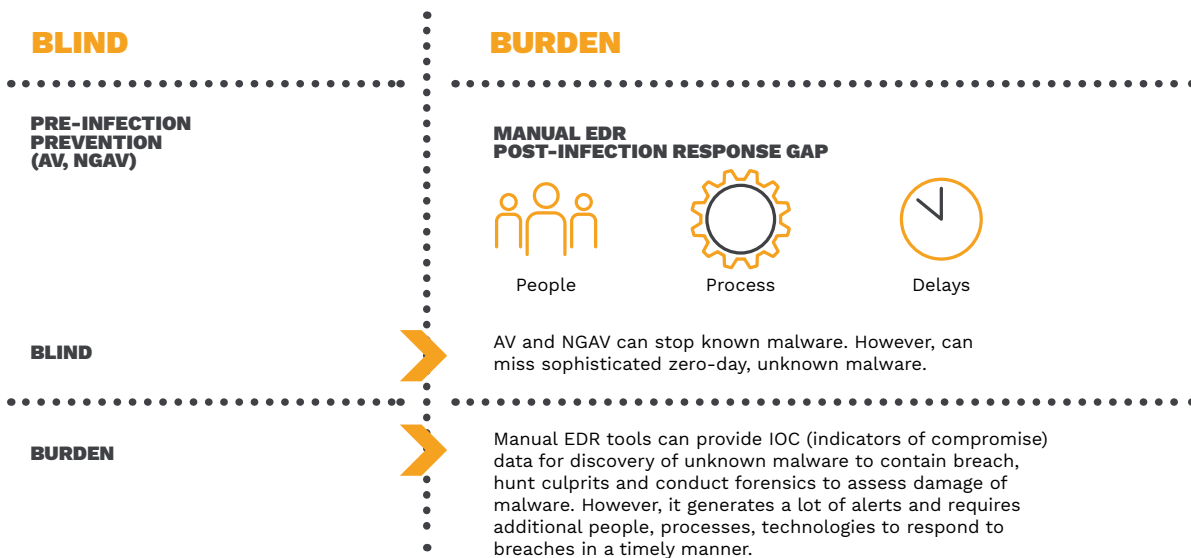

Once an endpoint is infected

EDR (endpoint detection and response). Detect, alert, contain, and stop as quickly as possible the unknown malware to stop breach impact, data exfiltration and manipulation.

The Vendor Problem – Leave You Blind And Impose Burden

Traditional and next generation antivirus (AV and NGAV) can be blind to sophisticated and state sponsored malware. Traditional endpoint detection and response (EDR) burdens security organizations with too many alerts and manual processes, hiring additional people and injecting more processes for breach response.

The Solution – 1440 Security Gives You Protection Without The Burden

Every MinuteSM EndPoint Protection Features

- Unified and modular endpoint security agent
- NGAV and automated EDR that contains and blocks malware real-time
- Cloud managed platform on premise or hosted
- Real-time blocking and containment of malware pre and post infection
- Broad endpoint OS support
- Threat hunting & incident response capabilities
- Protect data leakage from post infection

Every MinuteSM EndPoint Protection Benefits

- Manage endpoint security at scale
- Automate mundane endpoint security tasks for your people
- Eliminate breach response time altogether
- Protect endpoints even when infected
- Preserve business continuity post infection
- Improve SOC efficiency

About 1440 SECURITY

We help organizations protect and secure their infrastructure and mission critical data from advanced cyberattacks. With our depth of cyber security expertise, Every MinuteSM monitoring and cyber threat detection we help remove complexity from security operations while providing our clients with the most comprehensive real-time cyber threat defense.
